Abstract

The key economic importance of textiles and textile production, as well as their formative socio-cultural role in past societies, have been properly recognised due to recent advancements in textile studies. The current comprehensive framework of textile research in Greece encompasses all available evidence, including excavated textiles, textile tools, workshop remains, zooarchaeological and archaeobotanical data, as well as textual, iconographic and experimental sources. The notable economic and ritual value of Aegean textiles has been recognised through their prominent presence in Linear B records, rich iconography and large-scale production centres. Moreover, the economic value of textiles, deduced through the 'time-money' relationship and resulting from the properties of raw materials, workloads, techniques, and the required skills, as first formulated by Eero Jarva and Sanna Lipkin in 2014, is significant in Greece. This includes the possible pre-monetary function of textiles in the palatial economies, as suggested by Linear B.

The primary focus of my talk, however, is a less conspicuous yet significant body of evidence: threads and cords and their use-patterns in the Bronze Age Aegean. My studies, currently expanded through two new projects: TEXTile digitisAtIon toolS and mEthodS for cultural heritage [TEXTaiLES, by HORIZON REA ID 101158328]; and Exploring Textile Imprints on Clay from the 3rd and the 2nd Millennia BCE [ExplorTIC, by the National Science Centre in Poland, ID ID 2023/50/E/HS3/00094], are based on textile imprints on clay sealings stored (as copies) in the Archive of the Corpus der minoischen und mykenischen Siegel in Heidelberg. To highlight the potential economic value of these seemingly simple and utilitarian products, I will discuss their qualities, including their technical and aesthetic properties, as well as their possible symbolic significance. I will also present a few recognised use-patterns for threads and cords in administrative and sealing practices, including their reuse and recycling.
